

WhyPark Article Injector (WPAI) is an extremely useful tool for quickly adding quality content to sites hosted at [WhyPark](#) . WPAI gathers a list of the first **4,000** domain names you have hosted at [WhyPark](#) before routing you to [Article](#)

[Dashboard](#)

Once there, simply browse to your desired category and read the articles posted. When you find one you'd like to add to one of your

[WhyPark](#)

sites, select that site from your list of domains, click the E-Zine Ready link, and press Add Content (or Alt+C if you like keyboard short cuts). The article will be automatically formatted and added to your

[WhyPark](#)

site. It's that easy.

WhyPark Article Injector (WPAI)

If you have domains hosted at [WhyPark](#) , you **need** this software. WPAI enables webmasters and domainers to quickly add content to domains hosted with

[WhyPark](#)

[Download WhyPark Article Injector.](#)

Features:

- Gathers a list of the first 4000 domains hosted at [WhyPark](#) , and remembers them.
- Once your list of domains is generated, you will be routed to [Article Dashboard](#) where you can browse articles submitted by other authors.
- When you find an article you would like to add to one of your sites, select that site from your list of [WhyPark](#) sites and press the Add Content button (or Alt+C).
- That article will be formatted for your site and added as a new page.
- WPAI will remember which articles were added to which sites so you can not duplicate content on the same domain (although it will let you add the same article to multiple domains).
- If you add or remove sites from [WhyPark](#) , simply press the Add Sites button to recreate your domain list.

FAQ:

- Does this automatically add content to my sites?

Yes...sort of. You must still find the articles you want to add to your sites. There is no good way to automate **finding** good articles.

- What is [WhyPark](#) ?

[WhyPark](#) is a service that allows you to quickly and easily montize domain names. You can host an unlimited number of domains for FREE. It is worth your time to check it out.

- How do I transfer the list of articles I've already added to another computer?

In the Program Files/wpai folder you will find several numerically named sub folders. Simply copy and paste those folders and their contents to the Program Files/wpai folder of the destination computer.

- I have more than 4000 sites. How do I add more to your software?

You can't. Sorry.
